Data Structures Assignment 1

1- Implement a Double-Linked List using a class of employee as your data [ID, age, salary, departmentName]

Implement the same functionalities as in the lecture

1. InsertLast, Delete, Search, display (override toString to print employee data)

The added functionalities:

For each functionality, state complexity

1- AddFirst(), AddLast(), RemoveFirst(), RemoveLast(), Count()
2. getDataByIndex(int Index)
3. Stack using linkedList.
   Stack inherits from DoubleLinkedList
   Functionalities (push(data) , pop(), data peek(), isEmpty())
4. queue using LinkedList
   Queue inherits from DoubleLinkedList
   Functionalities (enqueue(data), data peek(), dequeue(), isEmpty())
5. Use Built in LinkedList & explore it is Functionalities
